"Crossing the Atlantic is not so simple"

Advisory & Expansion Support

Sharing my experience in working with different countries. Selling or establishing a company in a foreign country is not as simple as it seems. Having done this in France and the USA, my main purpose is to guide and save time. I am particularly interested in niche industrial products, especially businesses combining mechanical, electrical, automation or other technical components.

My preference is to start by helping entrepreneurs and management teams, where I believe my experience can be useful. Depending on the company and the opportunity, I am also open to investing alongside providing strategic and operational support.

Transatlantic Industrial Leadership

Graduated as a wood/mechanical engineer (Master) in 1994, I dedicated over 30 years to directing and scaling Joulin, family-owned industrial manufacturing firm specializing in advanced vacuum handling systems and custom robotics vacuum grippers. After managing French operations, I relocated to the US in 2007 to establish and manage the North American manufacturing facility. My US footprint spans East Coast (North Carolina) and West Coast (California) leadership, with partnerships across Canada, Europe, Australia/NZ, and Asia.

What I bring now

Having stepped back, I now mentor pro bono for early conversations. Selling or setting up abroad is rarely simple; the purpose is to save founders the time it took to learn it.

TRACK RECORD

France leadership 18 years

US leadership 18 years
(concurrently managed 2007–2012)

US footprint California & North Carolina

Export markets Canada, Europe, Au/Nz, Asia

FIELDS OF COMPETENCE

- Vacuum handling & gripper engineering
- Mechanical & electrical engineering
- Running SMEs* in France & the US
- Worldwide technical export
- Robotics & automation
- Technical B2B, niche industrial markets
- Wood industry

*Small Medium-sized Entreprises
